Additional Secretary & Mission Director (NHM)

D.O No. Z.33014/45/2020-RCH/Pt file-1
Dated the: 18th April, 2020

Dear Colleagues,

As you are aware that dedicated COVID Health Centres are to have beds with assured oxygen support and similarly Dedicated COVID Hospitals need to have fully equipped ICU, ventilators and beds with assured oxygen support.

Major sources of oxygen are oxygen cylinders (bed side plus central supply option), liquid oxygen (central supply) and oxygen generator (central supply).

Therefore, it is important to assess the requirement and availability of oxygen for all the Dedicated COVID Health Centre and Dedicated COVID Hospitals to ensure facility preparedness for treatment of COVID cases.

We have received a list of hospitals in the country that have cryogenic liquid oxygen facilities or oxygen generators from the Department of Promotion of Industries and Internal Trade (DPIIT). We have mapped this list against the COVID Dedicated hospitals and Health Centres entered by the States / UTs on the Covid portal. Based on this mapping, a list of 165 dedicated COVID facilities, having cryogenic tanks for storage of medical oxygen and 34 dedicated COVID facilities with own oxygen generation plant is enclosed. However, many of the COVID health facilities have oxygen supply only through cylinders which are of two types i.e. D Type (7 Cubic M) and B Type (1.5 Cubic M).

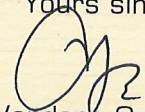

All the State/UT Nodal Officers for managing oxygen requirements for COVID-19 have been asked to calculate State wise oxygen requirement, availability and do the gap assessment of oxygen supply and oxygen cylinders. A simple format has been shared with them for doing this gap analysis (copy enclosed). In the light of the above, you are requested to:-

1. Get the gap analysis completed and send us the additional requirement, if any, of both types of oxygen cylinders at the email id [medicalo2concerns@gmail.com] at the earliest.
2. To bridge the gap in availability and supply, long-term option of building hospital specific medical oxygen generation plant to provide central supply through medical gas pipeline system can be undertaken by the State / UT. This would take at least one-month time and should be taken up on priority in the identified facilities. For this financial resources available under COVID package released to the States may be utilised.

Enclosed: As above

with warm regards

Yours sincerely

(Vandana Gurnani)

1. Additional Chief Secretary/Principal Secretary/Secretary-Health, all States/UTs.
2. Mission Director, National Health Mission, all States/UTs.

Oxygen requirement, availability and Gap analysis

[All calculation in cubic meters (m³)]

I. Name of the State:

II. Requirement of Oxygen:

1. No. of beds (excluding ICU beds) in Dedicated COVID Hospital (DCH) and Dedicated COVID Health Centre facilities(DCHC) x 7.14 litres x 60 minutes x 24 hrs / 1000 (to convert litres to cubic meter)= '**X**' cubic meter O₂
2. No. of ICU beds in DCH facilities x 11.90 litre x 60 minutes x 24 hrs / 1000 (to convert litres to cubic meter)= '**Y**' cubic meter O₂
3. '**X+Y**' is the total requirement of the State for Oxygen in cubic meter for dedicated COVID facilities.

III. Availability:

Source of Oxygen in dedicated COVID Hospitals (DCHC & DCH)	Calculation for O ₂	Total
a. No of cylinders available with the State	D Type (7 cubic meter) No. of Cylinders x 7 cubic meter = A in cubic meter	A+B
	B type (1.5 cubic meter) No. of cylinders x 1.5 cubic meter = 'B' in cubic meter	
b. O ₂ Generation through Pressure Swing Adsorption (PSA), If centralized manifold is available	Capacity in LPM (Litre per minute) / 1000 (to convert litres to cubic meter) = 'C' in cubic meter	C
c. Liquid Medical Oxygen, if centralized manifold is available	Capacity in cubic meter = 'D' (cubic meter)	D
Total availability		A+B+C+D (In cubic meter)

IV. Gaps to be addressed for Oxygen Supply

1. Gap in O₂ Supply = (X+Y) minus (A+B+C+D) in cubic meter.

2. Gap in O₂ cylinder: D type = _____

B type = _____
