

Key Findings of the CHO Phone Survey for the State of Rajasthan

In Rajasthan, call could be made to only one CHO with the available data. The CHO was posted at the facility from July 2018. The key findings are:

- The CHO had completed the 6-month training in IGNOU Certificate Programme in Community Health.
- The facility has already been upgraded to HWC and has been providing services related to NCDs.
- The training of the Primary Care was reported to be completed for all the ASHAs and MPWs posted at the HWC.
- With the IT infrastructure in place, the population enumeration and CBAC filling has been started at the facility.
- Among the common NCDs, screening has been started for hypertension, diabetes and breast cancer.
- The availability of medicines for Hypertension and Diabetes was there at the facility.
